Wall midplanes (9.25 / 43.5 mm)
Inner interfaces (8.5 / 42 mm)
Matched CPU comparison: only the boundary sampling radii vary
Particle centers inside native solids
Count
Native time (s)
Maximum solid penetration depth
Depth (mm)
Native time (s)
Fluid retained in source cavity
Particles (of 1920)
Native time (s)
Same archived 96 × 20 initial fluid and native state · 0.5 s / 4,000 steps per condition · dt = 125 µs · Geometry sampled at 100 Hz
