
Panel (a): solid = fixed-ID mean; fill = min–max; dashed = all-particle maximum. Panel (b): solid = RMS; dashed = maximum.

The 0.95–1.01 shading is a static reference band, not dynamic admission. Fixed initial IDs are not reclassified as the material deforms.

Different initial geometries; identical fixture mass, native map and parameters. Descriptive comparison only: no equilibrium, long-term stability or original-paper reproduction claim.
