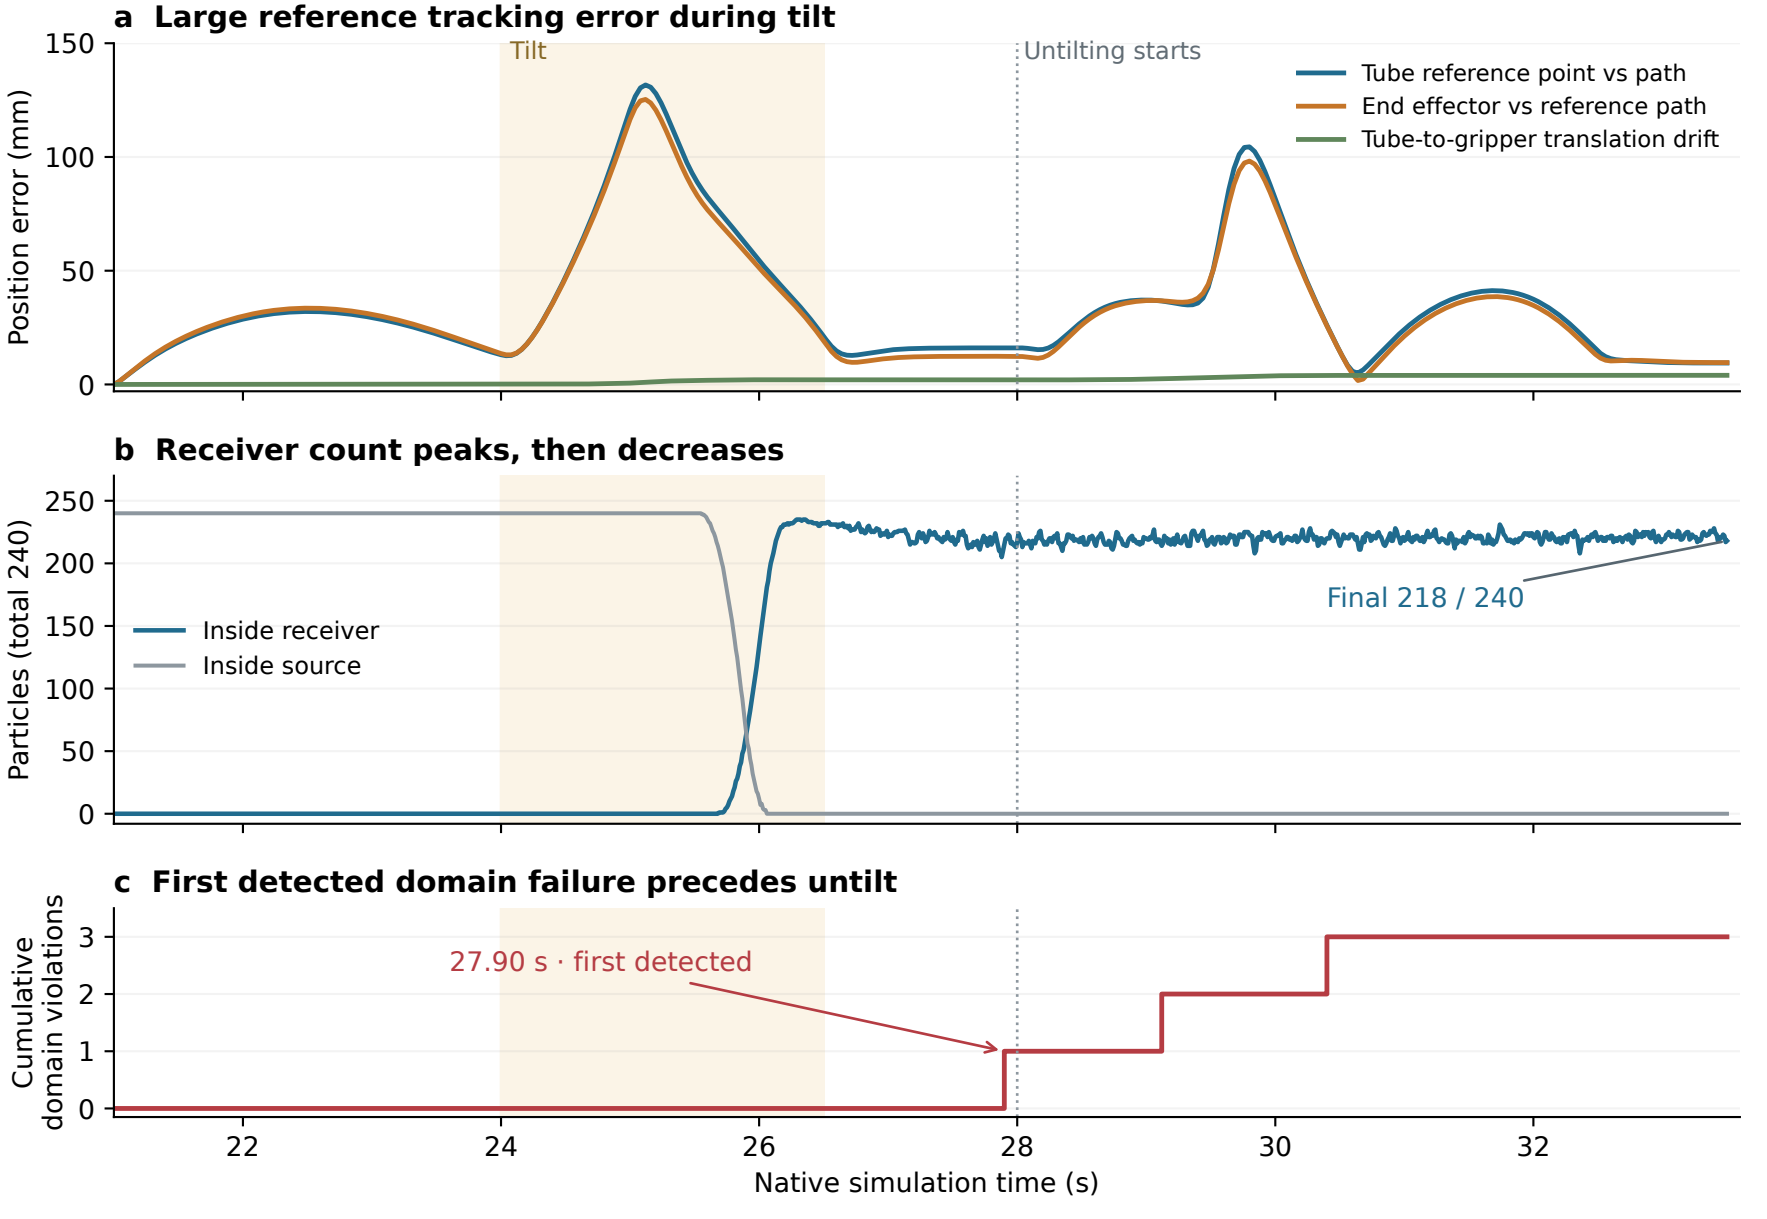
Handoff succeeds; the complete fluid-transfer trial fails

Dual Flexiv · one archived 33.5 s trial · no successful repair inferred



25 Hz poses vs reference path; executed per-step targets were not archived.
Tube reference point: local z = 80 mm (native wall top: 82 mm).
Particle counts/domain telemetry: 100 Hz. Sampled geometry does not exclude between-frame fluid errors.
One diagnostic association, not a demonstrated cause. Original failed trial and all acceptance gates retained.
