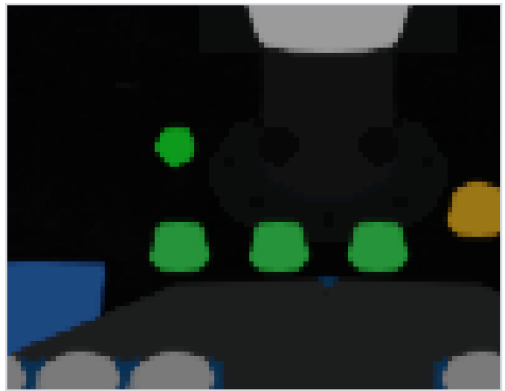
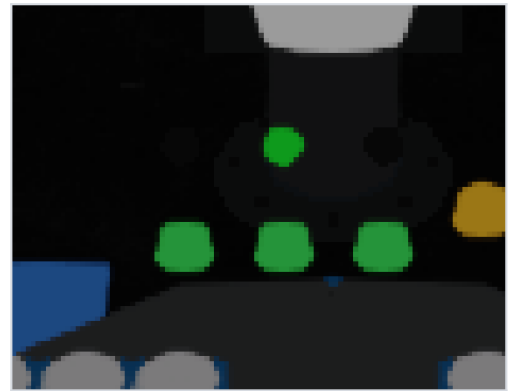
## Identical current images can require different remembered targets

(a) Earlier cue: bottle 0



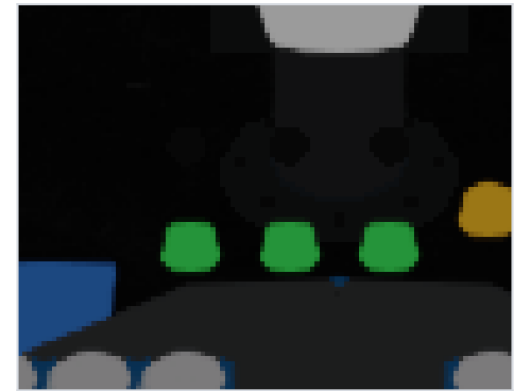
Correct target: bottle 0

(b) Earlier cue: bottle 1



Correct target: bottle 1

(c) Later: same current view



Current RGB cannot distinguish (a) / (b)

After cue-off: maximum full-frame RGB difference = 0/255 (both cameras, all three layouts).

Display crop only; controls use full raw RGB. Controlled ambient lighting. No agent memory result.
